

ROHIT SURYAWANSHI

Software Developer | Python | AI/ML

Nanded, Maharashtra, India | rohitsuryawanshi775682@gmail.com | +91-7756822035

GitHub | LinkedIn | LeetCode

Professional Summary

Computer Science Engineering student with hands-on experience in Python, Java, JavaScript, Flask, REST APIs, React.js, SQL, and AI/ML. Built end-to-end applications involving computer vision, deep learning, machine-learning models, APIs, databases, and web deployment. Strong foundation in Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, and software development.

Technical Skills

Languages: Python, Java, C, JavaScript, SQL

Frontend: React.js, HTML5, CSS3, Tailwind CSS

Backend: Flask, REST APIs, API Integration

AI/ML: TensorFlow, Keras, Scikit-learn, OpenCV, CNN, EfficientNetB0, Computer Vision, Deep Learning

Databases: PostgreSQL, Supabase

Deployment: Vercel, Render

Tools: Git, GitHub, VS Code

Core: DSA, OOP, DBMS, Software Development

Experience

Infosys Springboard

Feb 2026 – Apr 2026

AI/ML Virtual Intern

- Developed an AI/ML-based PCB defect detection and classification solution for automated analysis of printed circuit board images.
- Implemented an image-processing pipeline using ORB feature matching, image subtraction, Otsu thresholding, morphological processing, contour detection, and ROI extraction.
- Applied transfer learning with EfficientNetB0 using TensorFlow and Keras for classification of extracted PCB defect regions.

Projects

PCB Defect Detection and Classification System

Feb 2026 – Apr 2026

Python, TensorFlow, Keras, OpenCV, EfficientNetB0, React.js, JavaScript, Tailwind CSS

GitHub

- Built an end-to-end computer vision system using **693 raw images**, achieving **97.68% classification accuracy** for PCB defect classification.
- Developed a defect-localization pipeline using ORB feature matching, image subtraction, Otsu thresholding, morphological filtering, contour detection, and ROI extraction.
- Trained an EfficientNetB0 CNN using transfer learning with TensorFlow and Keras to classify extracted PCB defect regions.
- Developed a React.js web interface for image upload, model inference, and visualization of classification results.

Smart Crop Advisory System – AI Web Application

Apr 2026

React.js, JavaScript, TensorFlow, OpenCV, CNN, Scikit-learn, Supabase, Flask, REST APIs

Demo | GitHub

- Developed an AI-powered agriculture application supporting recommendations across **50+ crop types** and plant disease classification across **39 disease categories**.
- Trained and integrated machine-learning and deep-learning models using **50,000+ training images**, achieving **95% accuracy**.
- Implemented crop recommendation, plant disease detection, fertilizer guidance, authentication, and database integration using Flask, REST APIs, and Supabase.
- Built a responsive React.js interface for interacting with AI-driven agricultural recommendations and model predictions.

Education

MGM's College of Engineering, Nanded, Maharashtra

Aug 2023 – Aug 2027

Bachelor of Technology in Computer Science and Engineering

CGPA: 7.4/10

Certifications

- Infosys Springboard AI/ML Virtual Internship
- Python Basics – freeCodeCamp
- Database Management System – NPTEL
- Java Programming – NPTEL
